

I am asking that the petition 04-106 be rejected. Both my wife and I agree that satellite radio is a wonderful technology. We travel over the U.S. and can get reception and programming for the drive. Before, we were constantly searching and very often getting nothing or poor reception. My son drives for Schneider National and the traffic and weather have been a godsend for him saving him a great deal of time and fuel. It has been wonderful to get the variety of programming and the reception. It would be sad to see this kind of innovation be quashed by those protecting their own selfish interests.
